

## APPLICATIONS

- Osteoarthritis
- Tendon disorders
- Muscle tears
- Meniscus and ligament injuries
- Foot conditions such as plantar fasciitis
- Surgical procedures

## WHAT IS THE RECOMMENDED NUMBER OF PRP INJECTIONS?

One or more applications are recommended with a frequency that depends on the clinical situation and other criteria set by the physician.

## ARE THERE ANY SIDE EFFECTS?

Because PRP is made up of your own platelets and plasma, the risk of side effects is very low. However, rare side effects can occur including bleeding, infection at the site of injection, and a temporary increase of pain and inflammation at the site of injection.

## PLATELET-RICH PLASMA INJECTIONS MAY NOT BE APPROPRIATE TO PEOPLE WITH:

- Platelet disorders or high bleeding risk
- Infection in the injury site or active systemic infection
- Active cancer
- Autoimmune or inflammatory diseases

The information in this leaflet is not intended to replace advice from your doctor on treatment with Platelet Rich Plasma. For more information, talk to your doctor.

PLATELET RICH PLASMA TREATMENTS

## A FAST RETURN TO YOUR BEST LEVEL

Information for patients  
with musculoskeletal  
sports injuries

Sport injuries treatment  
with PRP is a new milestone  
in sports medicine

“ I no longer feel pain  
and I’m ready  
to compete again ”

J. R. M., 40 years old  
*(patellar tendinitis)*

## WHAT IS PRP?

**Platelet Rich Plasma (PRP)** is a product obtained from the patient’s own blood (autologous) with a concentration of platelets and other plasma bioactive elements above baseline values.

Platelets release growth factors and others biomolecules that are the functional active components responsible for stimulating and accelerating local tissue healing. When an injury occurs, this biological mechanism of cell repair and replacement is automatically activated.

**PRP treatment concentrates a large amount of Growth Factors at the injury site.**

**The success of PRP is supported  
by numerous clinical trials  
and scientific articles, but above all,  
by thousands of satisfied patients**

## WHAT EFFECTS CAN I EXPECT?

- Less inflammation and pain
- Accelerated healing of damaged tissues (tendons, cartilage, muscle, etc.)
- Increased joint and muscular mobility and functionality
- Shorter recovery time

## HOW DO YOU OBTAIN PRP?

- 1 A blood sample is drawn from the patient and processed under controlled conditions.  
↓
- 2 Blood components are separated and PRP is selected.  
↓
- 3 PRP is injected into the injury site.

## SAFETY FIRST

PRP contains your own platelets and plasma, meaning almost no risk of disease transmission, allergies or rejection.

**The treatment is performed** in the doctor’s office with no need for surgical facilities, always in full accordance with applicable law.
